

B. AMENDMENT TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A fiducial apparatus adapted to be inserted into a non-void target region comprising tissue, the fiducial apparatus comprising:

a body portion made of a material that is visible using electromagnetic radiation;
and

one or more anchoring devices connected to the body portion and configured to anchor the fiducial apparatus within the tissue of the non-void target region, each anchoring device having an unanchored position and an anchored position, the unanchored position permitting the body portion to move within the tissue of the non-void target region and the anchored position anchoring the fiducial apparatus and securing the body portion within the tissue of the non-void target region.

2. (original) The apparatus of Claim 1, wherein the body portion further comprises a radio opaque material so that the apparatus is viewable using electromagnetic radiation.

3. (original) The apparatus of Claim 1, wherein the body portion comprises a memory metal member that bends in response to an appropriate signal to anchor itself into the target region.

4. (original) The apparatus of Claim 3, wherein the appropriate signal further comprises an electric field.

5. (original) The apparatus of Claim 3, wherein the appropriate signal further comprises a predetermined temperature.

6. (original) The apparatus of Claim 4, wherein the memory metal further comprises nitinol.

7. (original) The apparatus of Claim 1, wherein each anchoring device further comprises an anchor member and an elastic member connected to the anchor member that urges the anchor member into the anchored position.

8. (original) The apparatus of Claim 7, wherein the anchor member comprises a spike that embeds itself into the target region.

9. (original) The apparatus of Claim 8, wherein the spike further comprises a pyramidal shaped member.

10. (original) The apparatus of Claim 7, wherein the anchor member is an elongated rectangular shaped member that embeds into the target region.

11. (original) The apparatus of Claim 1, wherein the target region comprises a target region within a human body.

12. (original) The apparatus of Claim 11, wherein the target region further comprises a tumor in the body of the patient.

13. (original) The apparatus of Claim 1, wherein the body portion further comprises a material that is viewable using a ultrasound image.

14. (currently amended) A method for anchoring a fiducial within tissue of a non-void target region, the method comprising:

inserting the fiducial into the tissue of the non-void target region, the fiducial having an anchoring device that anchors the fiducial within the tissue of the non-void target region, the anchoring device being held closed while being inserted into the tissue of the non-void target region; and

anchoring the fiducial and securing the fiducial within the tissue of the non-void target region after the fiducial is inserted into the tissue of the non-void target region, the anchoring device opening after the fiducial has been inserted into the tissue of the non-void target region.

15. (original) The method of Claim 14, wherein the insertion further comprises injecting the fiducial into the target region using a needle.

16. (original) The method of Claim 14, wherein the anchoring further comprises moving one or more anchor devices into an anchored position in order to embed the one or more anchor devices into the target region.

17. (currently amended) A fiducial apparatus, comprising:

a body portion; and

means for anchoring the body portion within tissue of a non-void target region so that the fiducial apparatus cannot move, the means for anchoring the body portion having an unanchored position and an anchored position, the unanchored position permitting the body portion to move within the tissue of the non-void target region and the anchored position anchoring the fiducial apparatus and securing the body portion within the tissue of the non-void target region.

18. (original) The apparatus of Claim 17, wherein the body portion further comprises a radio opaque material so that the apparatus is viewable using electromagnetic radiation.

19. (original) The apparatus of Claim 17, wherein the body portion comprises a memory metal member that bends in response to an appropriate signal to anchor itself into the target region.

20. (original) The apparatus of Claim 19, wherein the appropriate signal further comprises an electric field.

21. (original) The apparatus of Claim 19, wherein the appropriate signal further comprises a predetermined temperature.

22. (previously presented) The apparatus of Claim 19, wherein the memory metal further comprises nitinol.

23. (original) The apparatus of Claim 17, wherein each anchoring device further comprises an anchor member and an elastic member connected to the anchor member that urges the anchor member into the anchored position.

24. (original) The apparatus of Claim 23, wherein the anchor member comprises a spike that embeds itself into the target region.

25. (original) The apparatus of Claim 24, wherein the spike further comprises a pyramidal shaped member.

26. (original) The apparatus of Claim 23, wherein the anchor member is an elongated rectangular shaped member that embeds into the target region.

27. (original) The apparatus of Claim 17, wherein the target region comprises a target region within a human body.

28. (original) The apparatus of Claim 27, wherein the target region further comprises a tumor in the body of the patient.

29. (original) The apparatus of Claim 17, wherein the body portion further comprises a material that is viewable using a ultrasound image.
